## Conditions for Severe Weather

For thunderstorms to develop, the air must become unstable, and the following conditions must be present:

- Abundant moisture, which means relatively high dew point readings.
- Some "trigger" that will make the air lift, which could be an approaching cold front or upper air trough.
- The right atmospheric conditions for unstable air, which means air pressure is dropping.

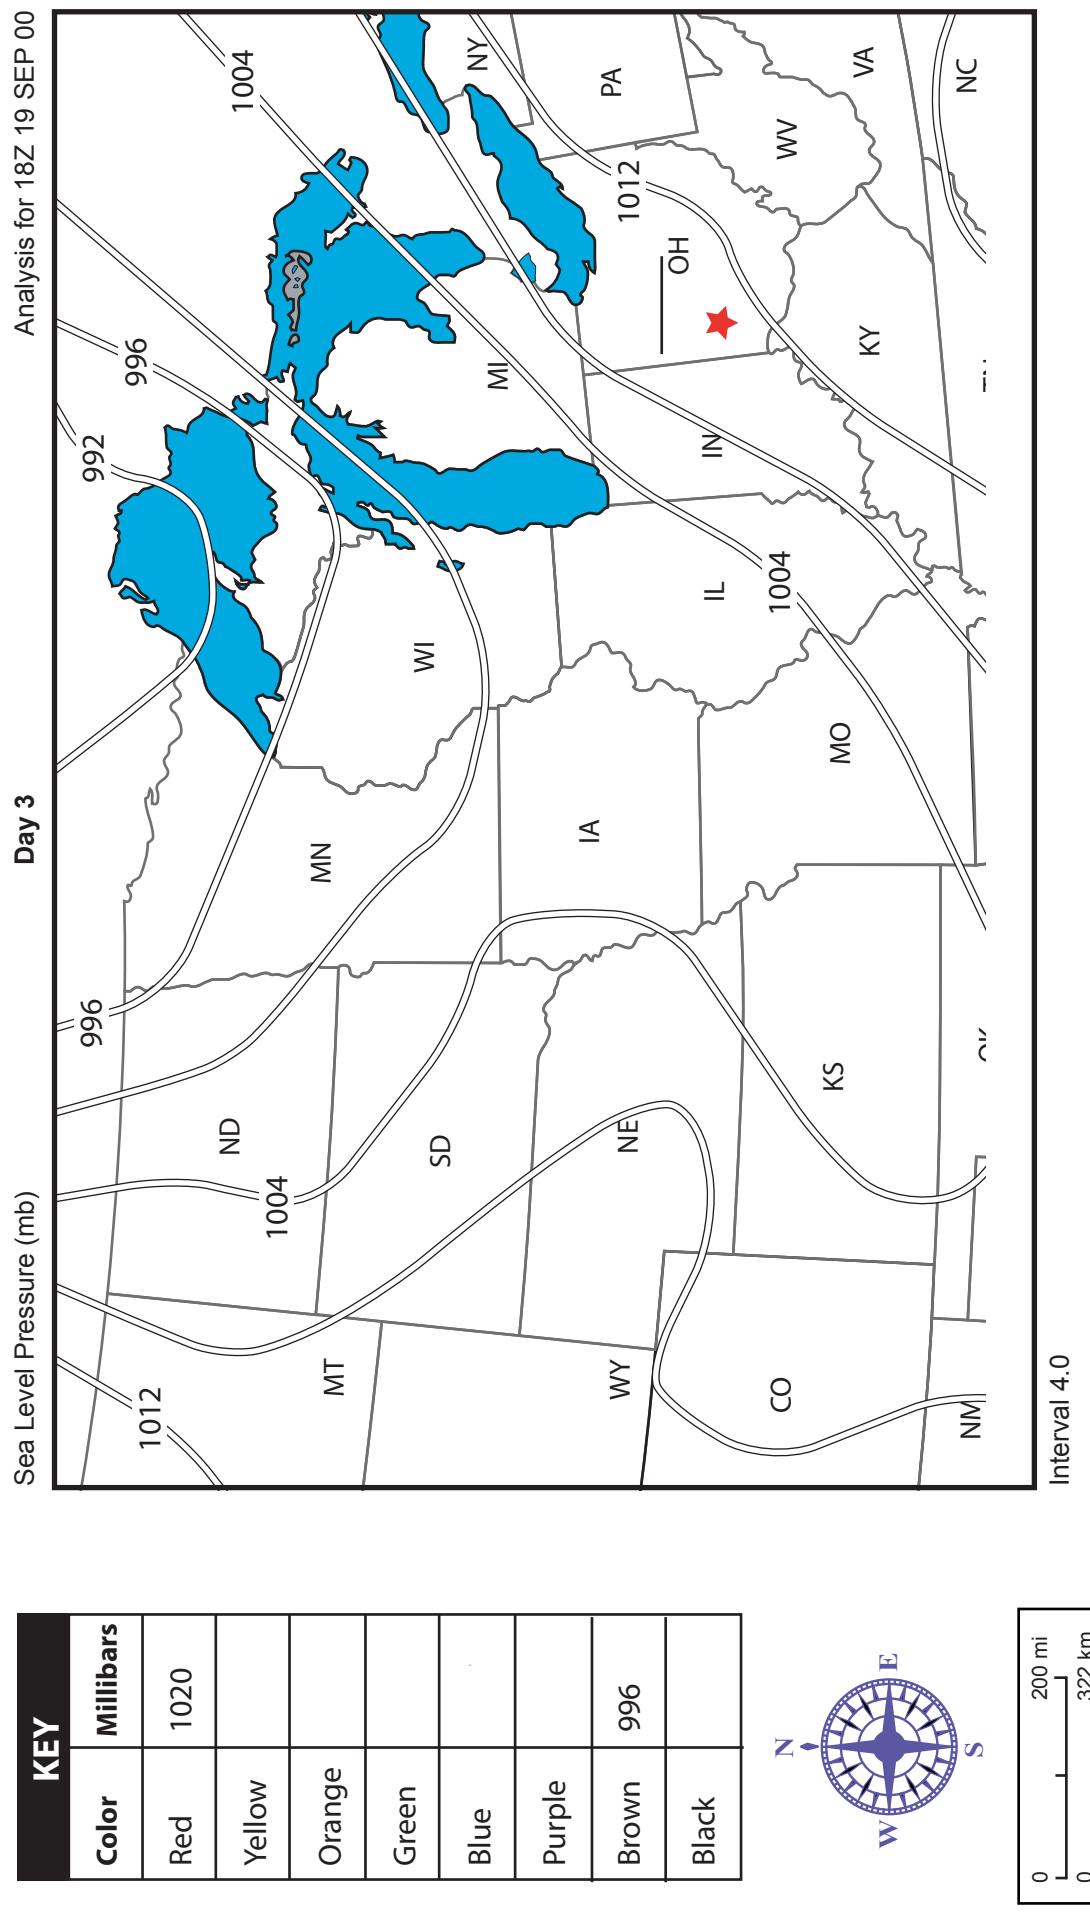

Team condition	Weak possibility of severe weather	Moderate possibility of severe weather	Strong possibility of severe weather
<b>Air pressure</b> pressure reading over threatened area	>1010 mb	1010 to 1005 mb	< 1005 mb
<b>Humidity</b> surface dew point readings	55° F	56° to 64° F	> 64° F
<b>Temperature</b> cold front	Is a cold front moving into the area? If yes, how close is it?		
<b>Wind</b> jet stream	Is a trough approaching the area? If yes, how close is it?		

## Air Pressure Team - Day 3

First, fill in the key with a pattern of numbers increasing or decreasing by four.

Some isobar lines might not be numbered. Next, print the correct numbers next to those lines. Then, using the color key, trace over all isobar lines.

The star in Ohio marks Dayton. Estimate the air pressure reading for Dayton. Record it on the line. Is air pressure rising or falling? What do you expect Dayton's weather will be in 24 hours? Report predictions to Weather Central.

## Humidity Team - Day 3

### Dew Point Temperature

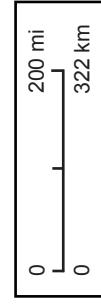

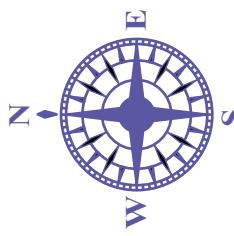

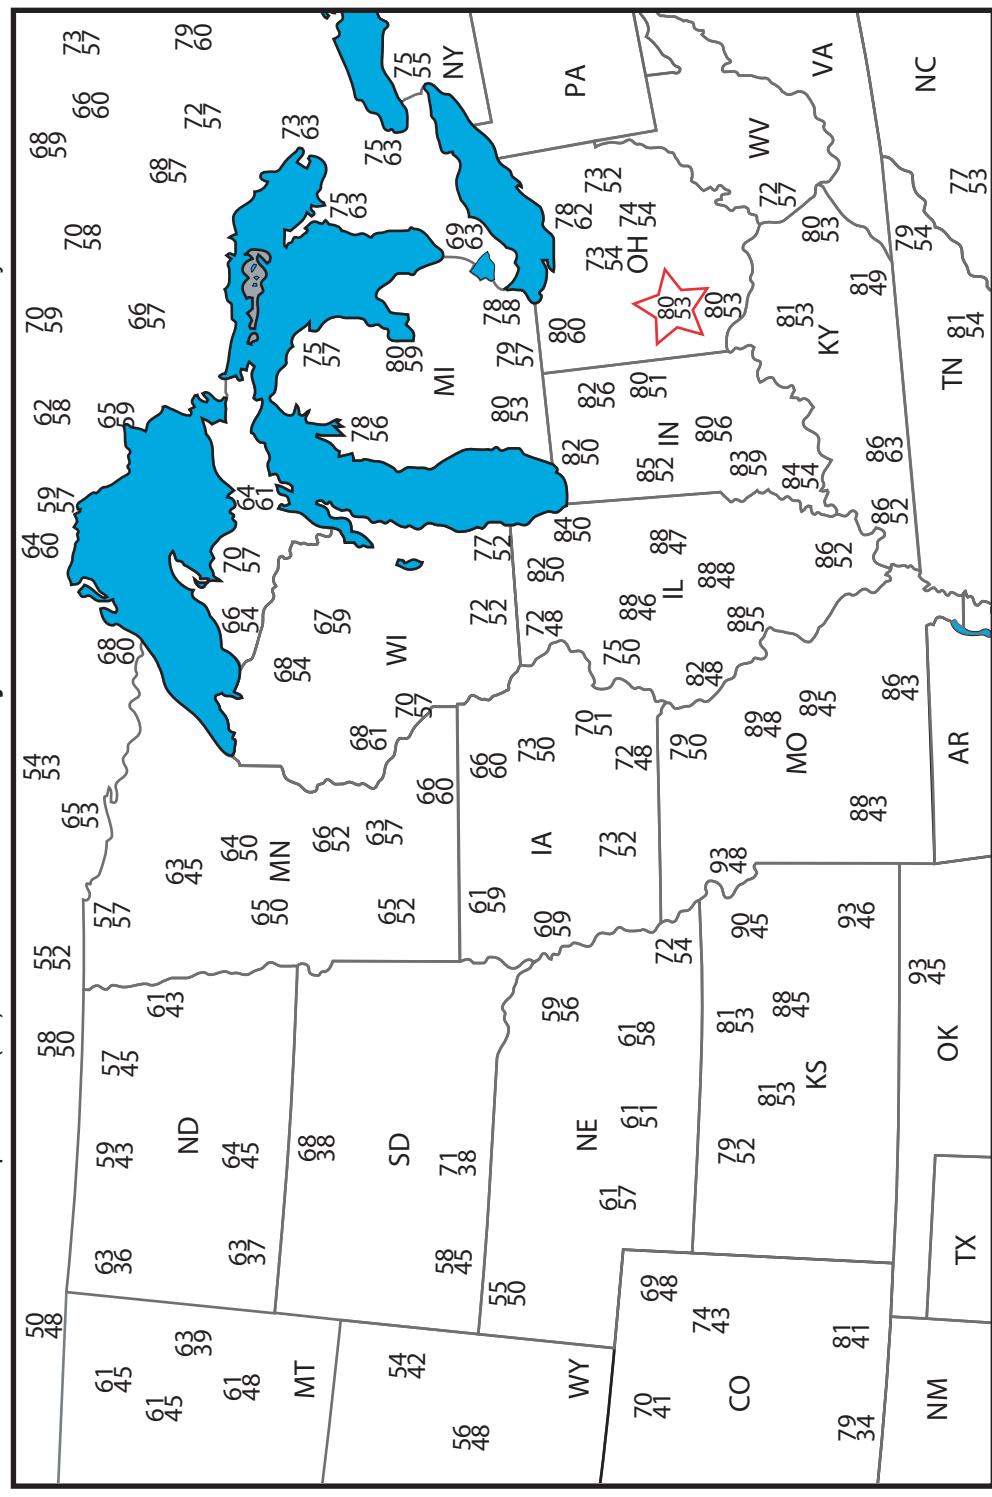

The possibility of cloud formation increases as the air temperature drops closer to its dew point.

**Important:** Use the relative humidity map you have already completed to assist you. Find the places on that map with relatively high humidity and begin the following search in those areas.

Circle the places on the dew point temperature map where the difference between the surface air temperature (top number) and the dew point temperature (bottom number) is 10 degrees or less.

Look at both of today's maps. Is the possibility of precipitation for Dayton, OH, increasing or decreasing? Be ready to report to Weather Central.

Surface and Dew Point Temperature (°F)

## Days 2 and 3 Humidity Team Graph Data for Dayton

---

HUMIDITY DATA

### Day 2

EDT	Temperature (degrees F)	Dew Point (degrees F)	Difference
2 p.m.	76	52	24
3 p.m.	78	53	
4 p.m.	79	53	
5 p.m.	80	51	
6 p.m.	78	53	
7 p.m.	77	52	
8 p.m.	74	52	
9 p.m.	71	54	
10 p.m.	67	54	
11 p.m.	66	54	

### Day 3

EDT	Temperature (degrees F)	Dew Point (degrees F)	Difference
2 p.m.	80	53	27
3 p.m.	81	53	
4 p.m.	83	52	
5 p.m.	83	51	
6 p.m.	82	52	
7 p.m.	79	53	
8 p.m.	75	53	
9 p.m.	74	54	
10 p.m.	73	56	
11 p.m.	72	56	

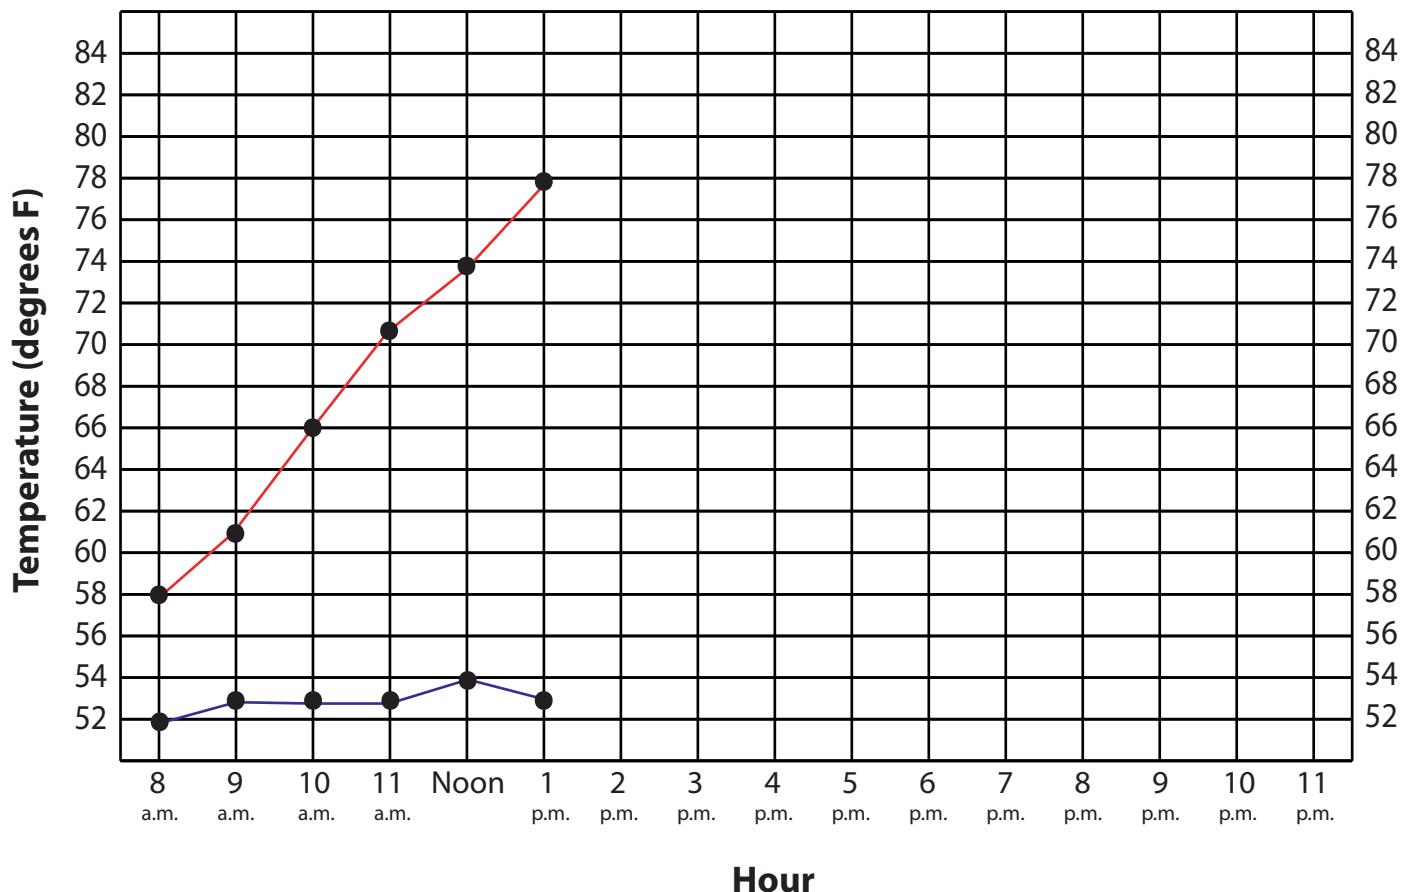

## **Humidity Team Graph Day 3**

Finish the line graph of temperature readings for Dayton on day 3. Ask your teacher for the data.

Graph the temperature in red. Graph the dew point in blue.

Is the temperature dropping toward the dew point? Is the possibility of severe weather in Dayton increasing or decreasing?

Also check the Conditions for Severe Weather chart.

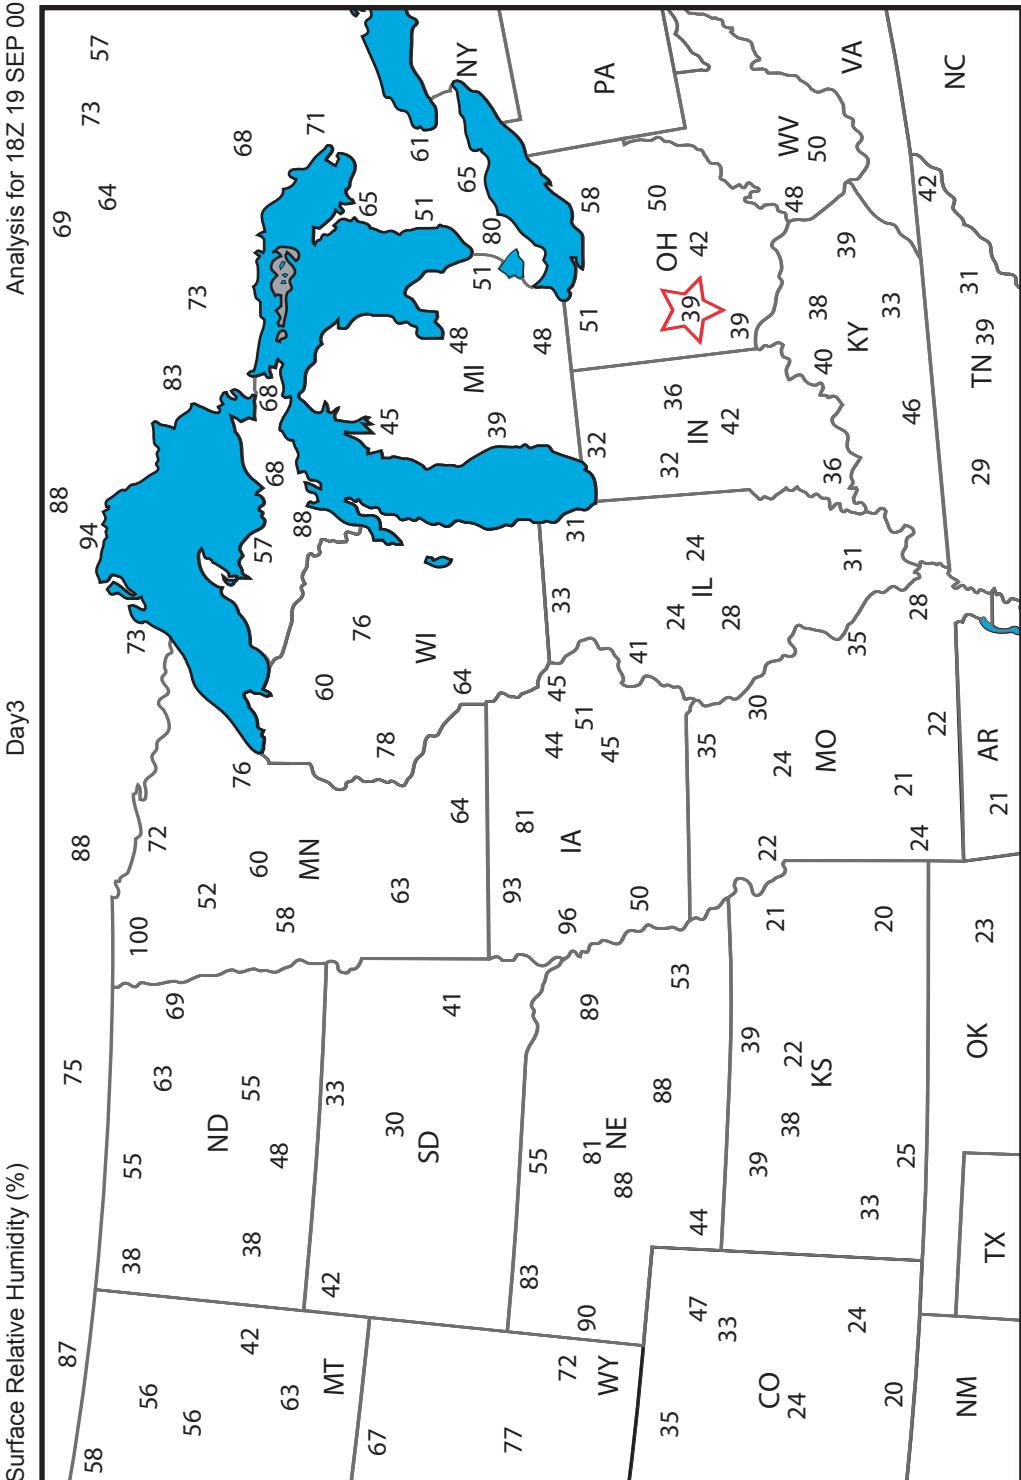

# Humidity Team - Day 3

## Relative Humidity

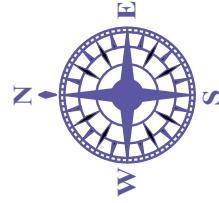

Important: Complete this map *before* starting the dew point temperature map.

The possibility of precipitation *increases* as the relative humidity approaches 100 percent. Circle each number with the corresponding color in the key.  
DO NOT shade in the circle. Where might precipitation be possible?

Compare the days 2 and 3 maps. The star in Ohio marks Dayton. Do you notice any weather patterns or trends that would affect the weather in Dayton in 24 hours?

KEY	
Color	%
Red	$\geq 90$
Orange	80-89
Yellow	70-79
Green	60-69
Blue	50-59
Purple	40-49
Brown	30-39
Black	$\leq 29$

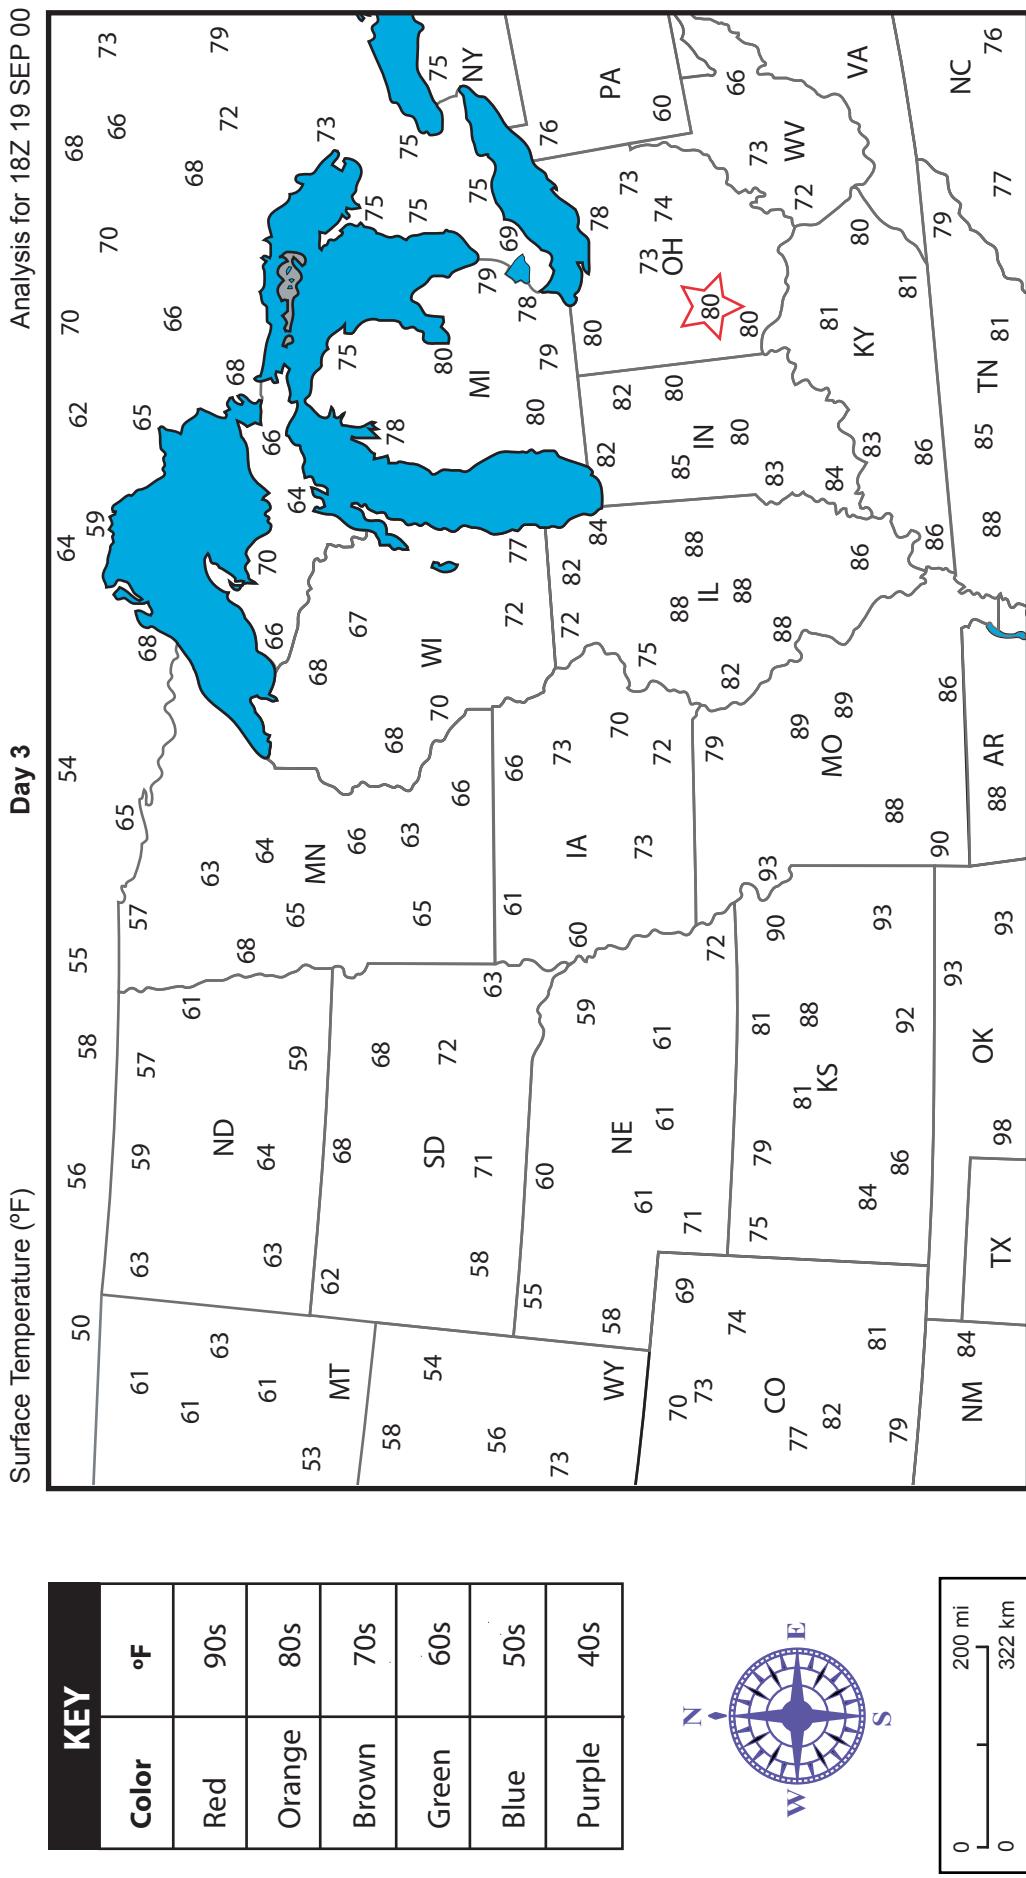

Temperature Team - Day 3

The surface temperature readings on this map are in degrees Fahrenheit. Circle each number with the corresponding color in the key. DO NOT shade in the circle.

Do you see a place on the map that might indicate a front, which is a narrow zone of air between two opposing air masses with different temperatures, humidity, or both? If so, draw a line to show its position.

Is it a warm front or cold front? How might it affect Dayton's weather on day 4? Report predictions to Weather Central.

## Days 2 and 3 Temperature Team Graph Data for Dayton

---

TEMPERATURE DATA	
EDT	Temperature (degrees F)
2 p.m.	76
3 p.m.	78
4 p.m.	79
5 p.m.	80
6 p.m.	78
7 p.m.	77
8 p.m.	74
9 p.m.	71
10 p.m.	67
11 p.m.	66

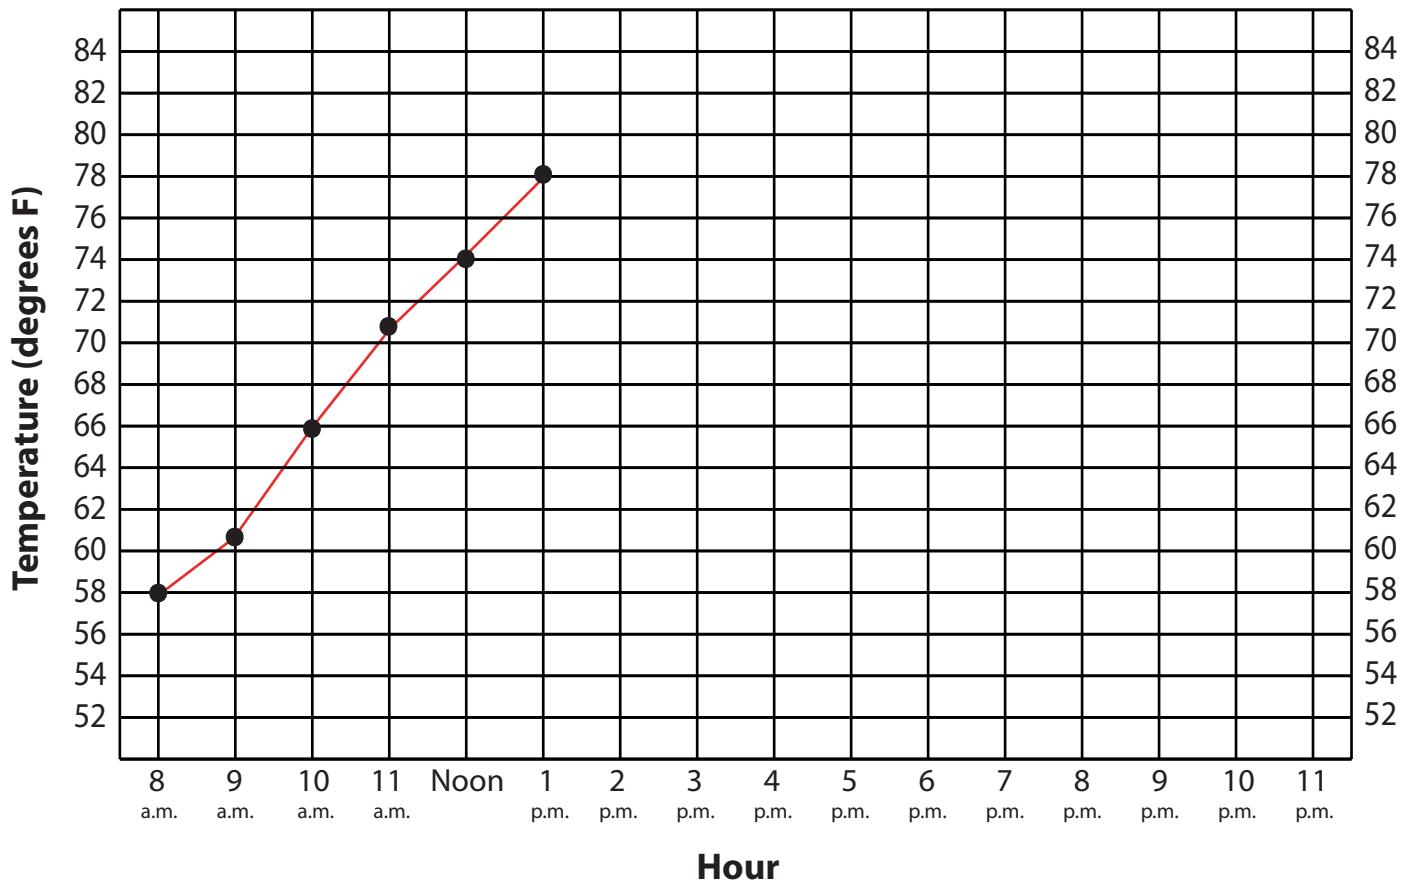

TEMPERATURE DATA	
EDT	Temperature (degrees F)
2 p.m.	80
3 p.m.	81
4 p.m.	83
5 p.m.	83
6 p.m.	82
7 p.m.	79
8 p.m.	75
9 p.m.	74
10 p.m.	73
11 p.m.	72

## Temperature Team Graph Day 3

Finish the line graph of temperature readings for Dayton on day 3. Ask your teacher for the data.

Graph the temperature in red.

Also check the Conditions for Severe Weather chart.

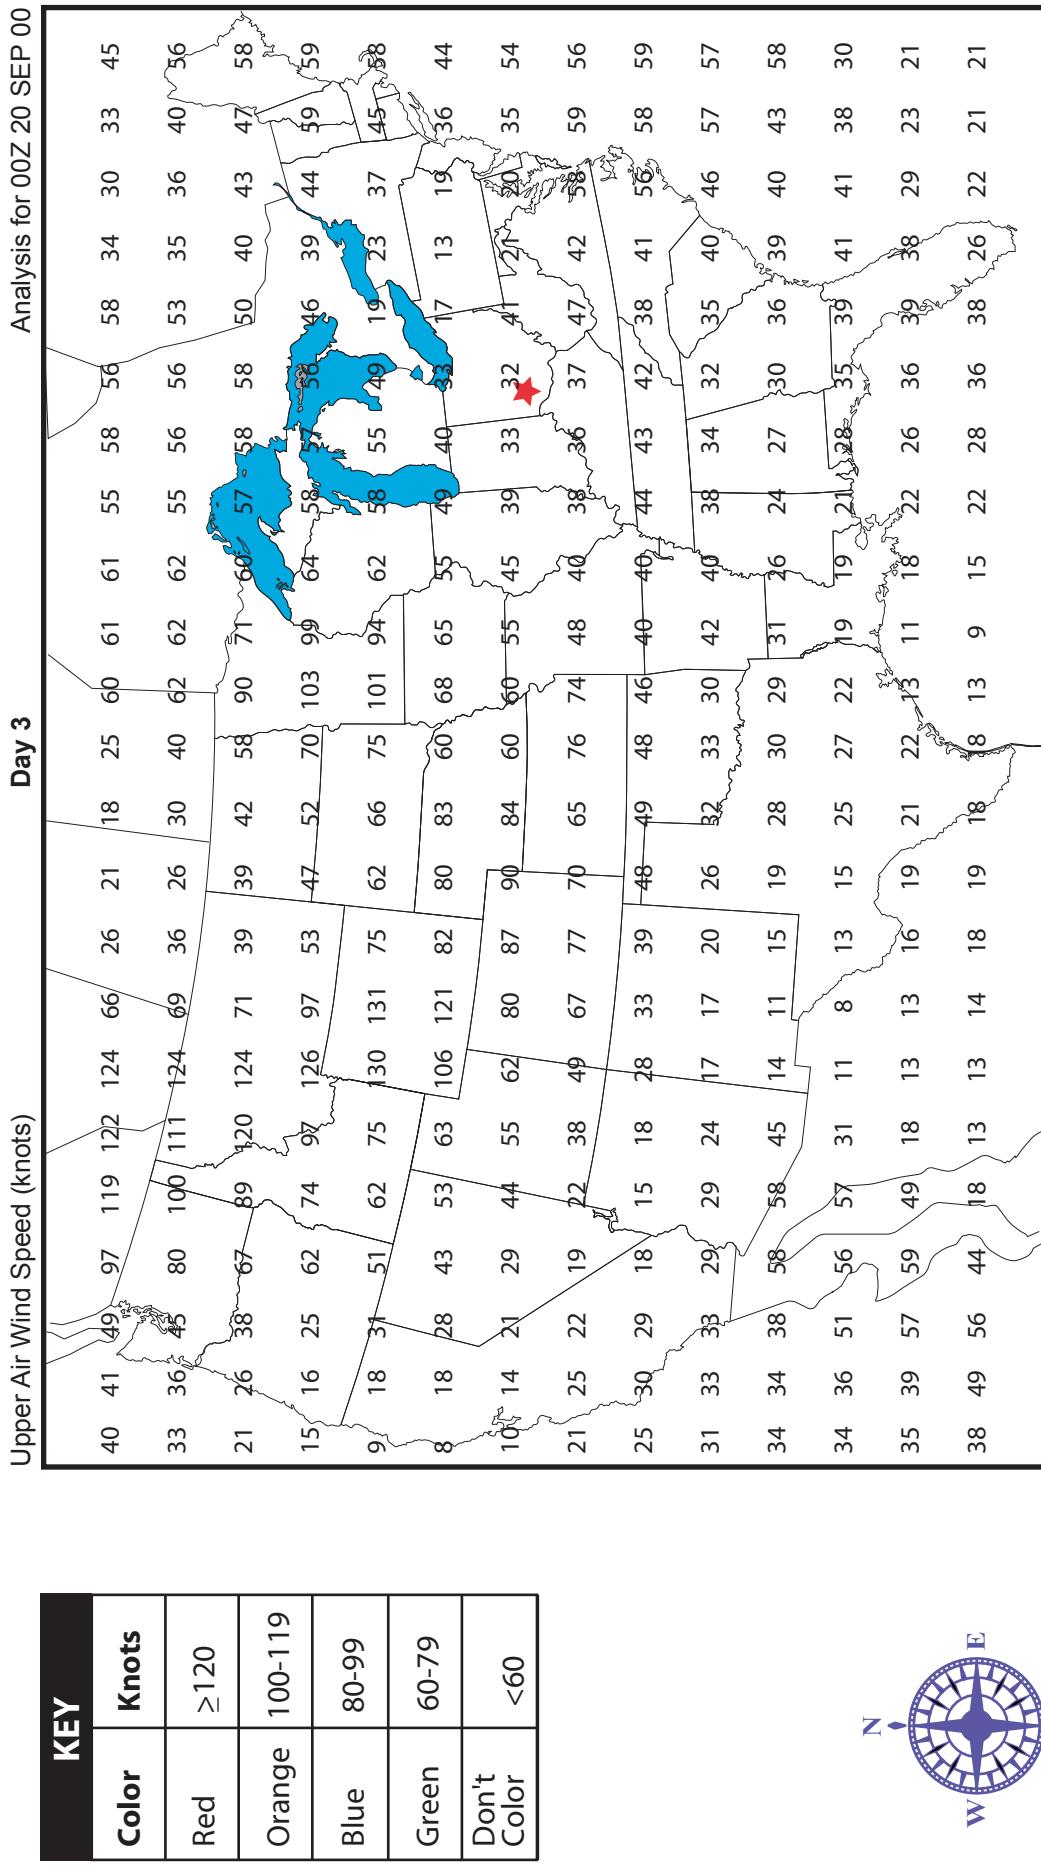

## Wind Team - Day 3

Jet streams are narrow corridors of very strong winds at altitudes from 30,000 to 50,000 feet. They blow in a wavy pattern from west to east across North America at speeds exceeding 60 knots.

The shape of the jet stream is important in weather forecasting. Troughs ( U ) of low pressure air that dip south bring cool, cloudy weather. Ridges ( N ) of high pressure air that rise north bring warm, clear weather.

Circle each number with the corresponding color in the key. DO NOT shade in the circle. Do you notice a trough or ridge? What is the position of the jet stream in relation to Dayton, OH (indicated by a star)? What is your forecast for the Dayton air show in 18 hours?

## Days 2 and 3 Wind Team Graph Data for Dayton

---

WIND DATA

### Day 2

EDT	Wind Speed (knots)
2 p.m.	5
3 p.m.	8
4 p.m.	6
5 p.m.	5
6 p.m.	5
7 p.m.	7
8 p.m.	8
9 p.m.	8
10 p.m.	8
11 p.m.	6

WIND DATA

### Day 3

EDT	Wind Speed (knots)
2 p.m.	12
3 p.m.	14
4 p.m.	12
5 p.m.	12
6 p.m.	12
7 p.m.	12
8 p.m.	10
9 p.m.	11
10 p.m.	12
11 p.m.	13

## Wind Team Graph Day 3

Surface winds blow across the Earth at altitudes from 0 to approximately 3,000 feet. The strength of surface winds or a sudden change in wind speed or direction can adversely affect the takeoff and landing of small planes and the safety of a fireworks display.

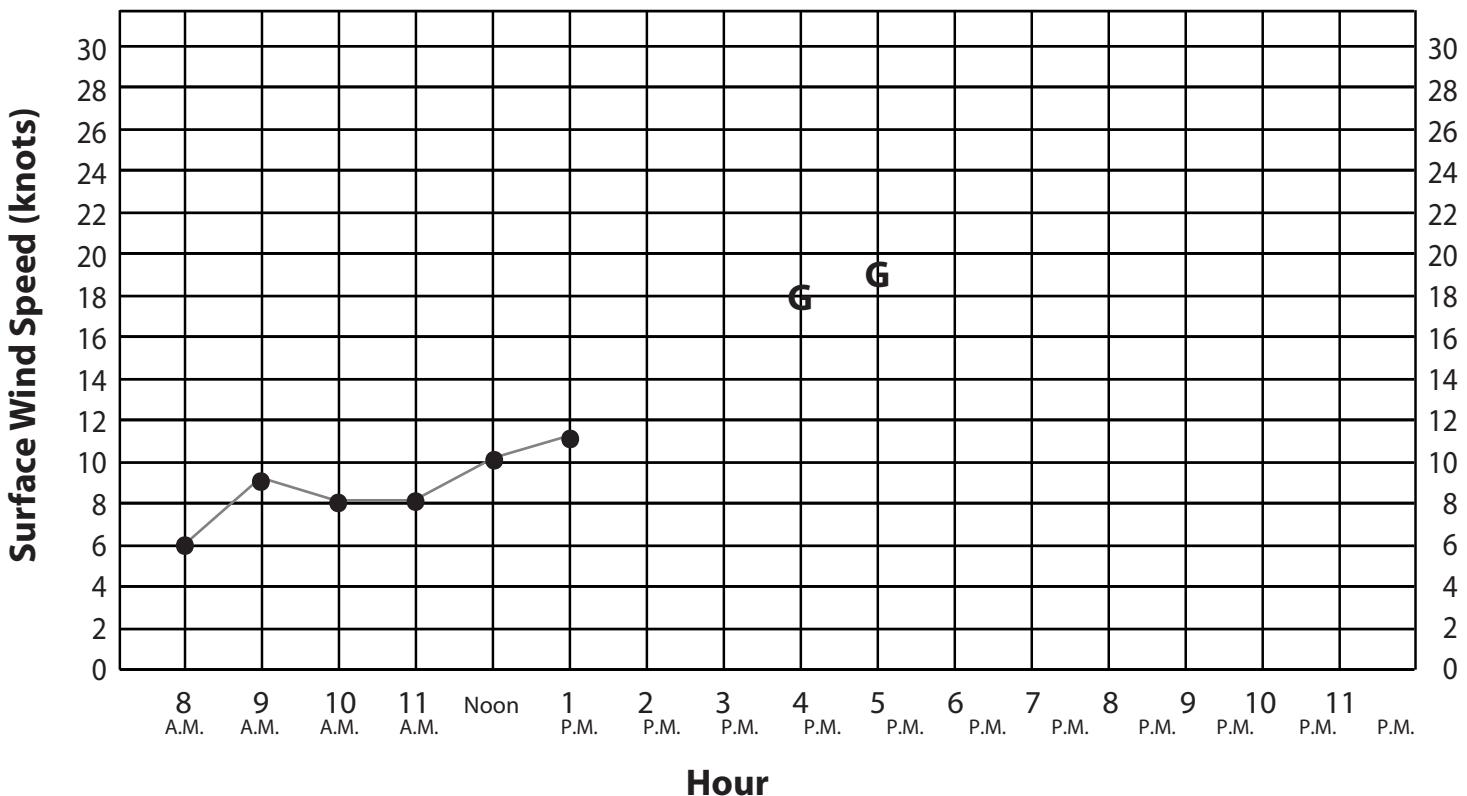

Finish the line graph of surface wind speeds for Dayton on day 3. Ask your teacher for the data. Are there any wind gusts (indicated by the letter "G" on the graph)? When did they occur?

Compare the day 2 and day 3 graphs. Are the winds becoming stronger or growing weaker? What is your weather prediction for the events scheduled on day 4?

0-6 knots  
Weak possibility of severe weather

7-21 knots  
Moderate possibility of severe weather

22-40 knots  
Strong possibility of severe weather

### Key

**G = Gust**

**1 Knot = 1.151 miles/hr.**
